

Getting Started with React Native Web

Using Expo

Setup

Publishing

We chose [Github-Pages](#) to host our site. According to [expo doc](#):

- If you haven't done so:

```
git init
git remote add origin <YOUR_GITHUB_PAGES_URL>
yarn add -D gh-pages
```

- Add the following to your package.json:

```
/* package.json */
{
  "homepage": "http://evanbacon.github.io/expo-gh-pages",
  "scripts": {
    "deploy": "gh-pages -d web-build",
    "predeploy": "expo build:web"
  }
}
```

- Finally deploy with:

```
yarn deploy
```
